

Global STAC Live, Fall 2021

# Data Center Precise Time

Dan Biederman and Dave Cohen

# Notices & Disclaimers

Intel technologies may require enabled hardware, software or service activation.

No product or component can be absolutely secure.

Your costs and results may vary.

Intel does not control or audit third-party data. You should consult other sources to evaluate accuracy.

# Time Sync Trends and Silicon Implementations

## Cellular Industry Precise Time requirements

- Example: ITU-T 8273.2 Class D - 5ns Total Error per node.

## Silicon vendors have implemented these technologies for Cellular customers

- Servers like Intel® Atom™ P5900
- FPGAs like Agilex™ and Stratix® 10
- NICs (E810-XXVDA4T)

## Precise Time in the data center seems to be following that of the Cellular Industry, just a few years behind

## Data Centers will use and improve on these cellular technologies (i.e., OCP-TAP)

# Use Case: Shared Database, Storage, Cache, etc.

- OCP-TAP presentation on CockroachDB by Nathan VanBenschoten
  - Fewer Transaction Retries
  - Less Transaction Waiting
  - Strict Transaction Serialize-ability
- End-to-End Precision Give Amazing results
- “as the clock uncertainty  $T$  was reduced from 1 ms to 10  $\mu$ s and then to 100 ns, the retry rate fell from 99.30% to 4.74% and to 0.08% in an experiment with 10,000 reads for each value of  $T$ .” Geng\*

\* Reference: “Exploiting a Natural Network Effect for Scalable, Fine-grained Clock Synchronization,” Geng, et.al., Proceedings of the 15th USENIX Symposium on Networked Systems Design and Implementation (NSDI '18). April 9–11, 2018 ▪ Renton, WA, USA.

# Use Case: Trusted Time at the Edge

Must be authenticated

Must be verify-able

- Kicked off if hacked
- Kicked off is intercepted

Valid time-stamper at the edge

Time-As-A-Service

End-to-End Precision:

- Depends on application

# Use Case: Mass Online Platforms (Games)

Lower latency gives an advantage

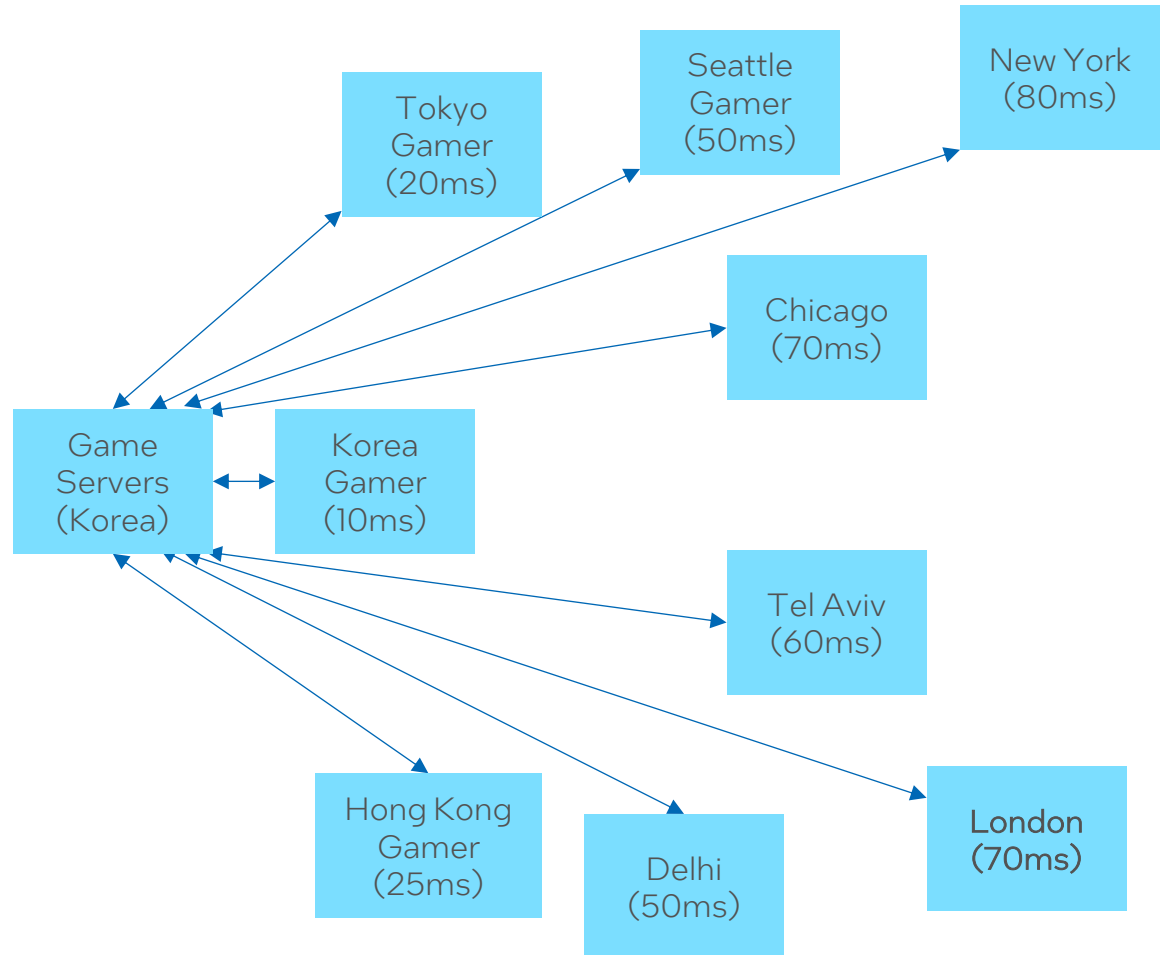

People will move closer to the server

Instead, time stamp action at the customer then delay a decision for 100ms.

End-to-End Precision: <1 microsecond (globally)

# Use Case: Stock Exchange

## Current Stock Exchange

Contract on the table  
One place for all transactions  
(the table)

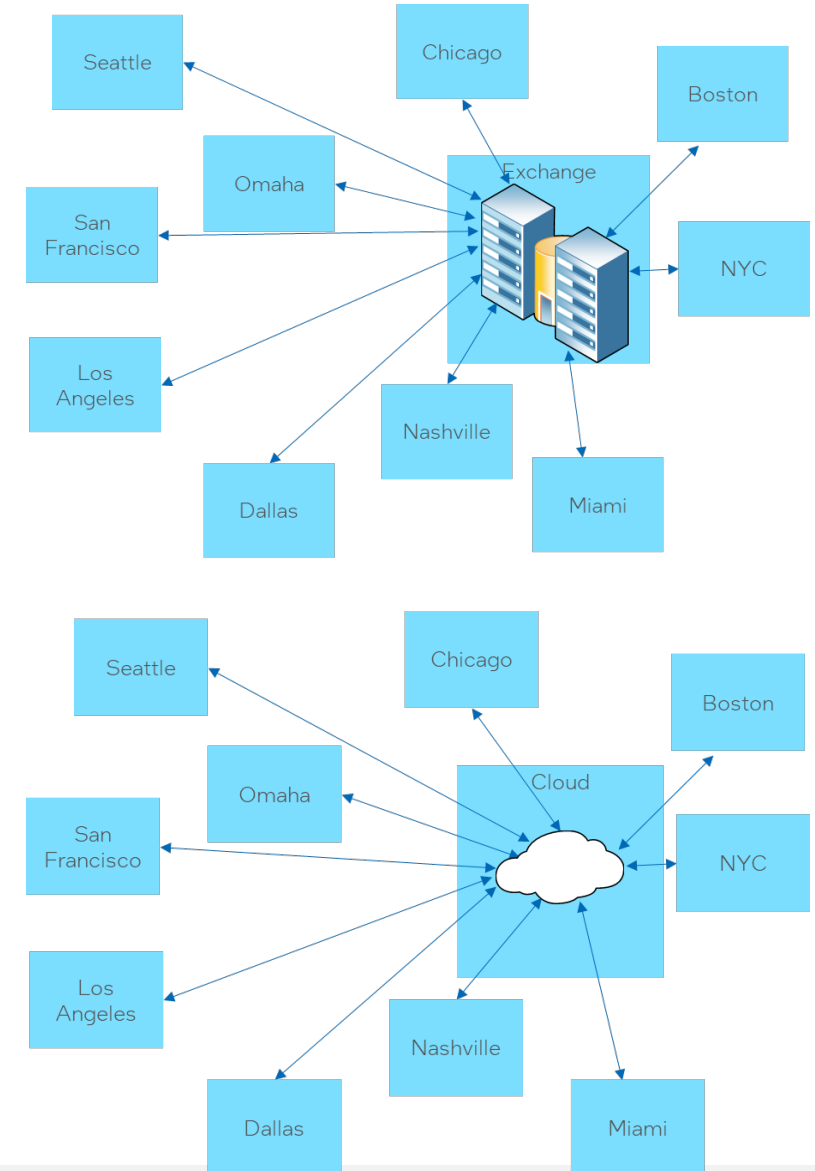

## Distributed Stock Exchange

If there was a precise time known, it could be based on Time Stamps  
Must be trusted time  
Must be verifiable and traceable

## End-to-End Precision

Skewness of clocks must be less than the latency of the network  
Usually in the nanoseconds

# Conclusion

- Time is important to data center application
- Cloud Service Providers are trending to:
  - Reuse precise time technologies from the Cellular Industry
  - Develop new technologies for the Data Center (OCP-TAP)
- Data Centers and Financial Services Companies can adapt Precise Time technologies with amazing results!

“What will you do with Precise Time in your business?”

The Intel logo is centered on a solid blue background. It features the word "intel" in a white, lowercase, sans-serif font. A small, light blue square is positioned above the first vertical stroke of the letter 'i'. To the right of the word "intel" is a small white registered trademark symbol (®).

intel®
